

PROJECT 1

Provisioning an Azure Storage account using the Azure portal.

- Open the Azure Portal
 - Select storage accounts from the Azure service menu
 - A new window "Create a storage account" opens up
 - This window has 7 different tabs Basics, Advanced, Networking, Data protection, Encryption, Tags, Review
- In the Basics tab, select the Azure subscription, Resource group, storage account, Region, Performance and Redundancy.
- In the advanced tab, enable hierarchical namespace under the Data Lake Storage Gen2 heading
- Select the Networking tab. connect your account either privately or publicly.
